(54) Title: METHOD AND SYSTEM FOR PROVIDING A COVERT WARNING NOTIFICATION OF A HAZARD TO AN AIRCRAFT

(57) Abstract: A system and method for providing a covert warning notification of a hazard to an aircraft is provided. Generally, the system contains a detection system capable of detecting the hazard, and a transceiver capable of allowing the system to provide the covert warning to a location external from the aircraft. A memory and a processor are also provided within the system, where the processor is configured by the memory to perform the steps of: determining a category of radar system associated with a received signal; determining a modulation scheme, based on the determined category of radar system, for displaying an array of icons on the location external from the aircraft, the array of icons providing the covert warning; and using the received signal to provide the array of icons.
